

How to read your map

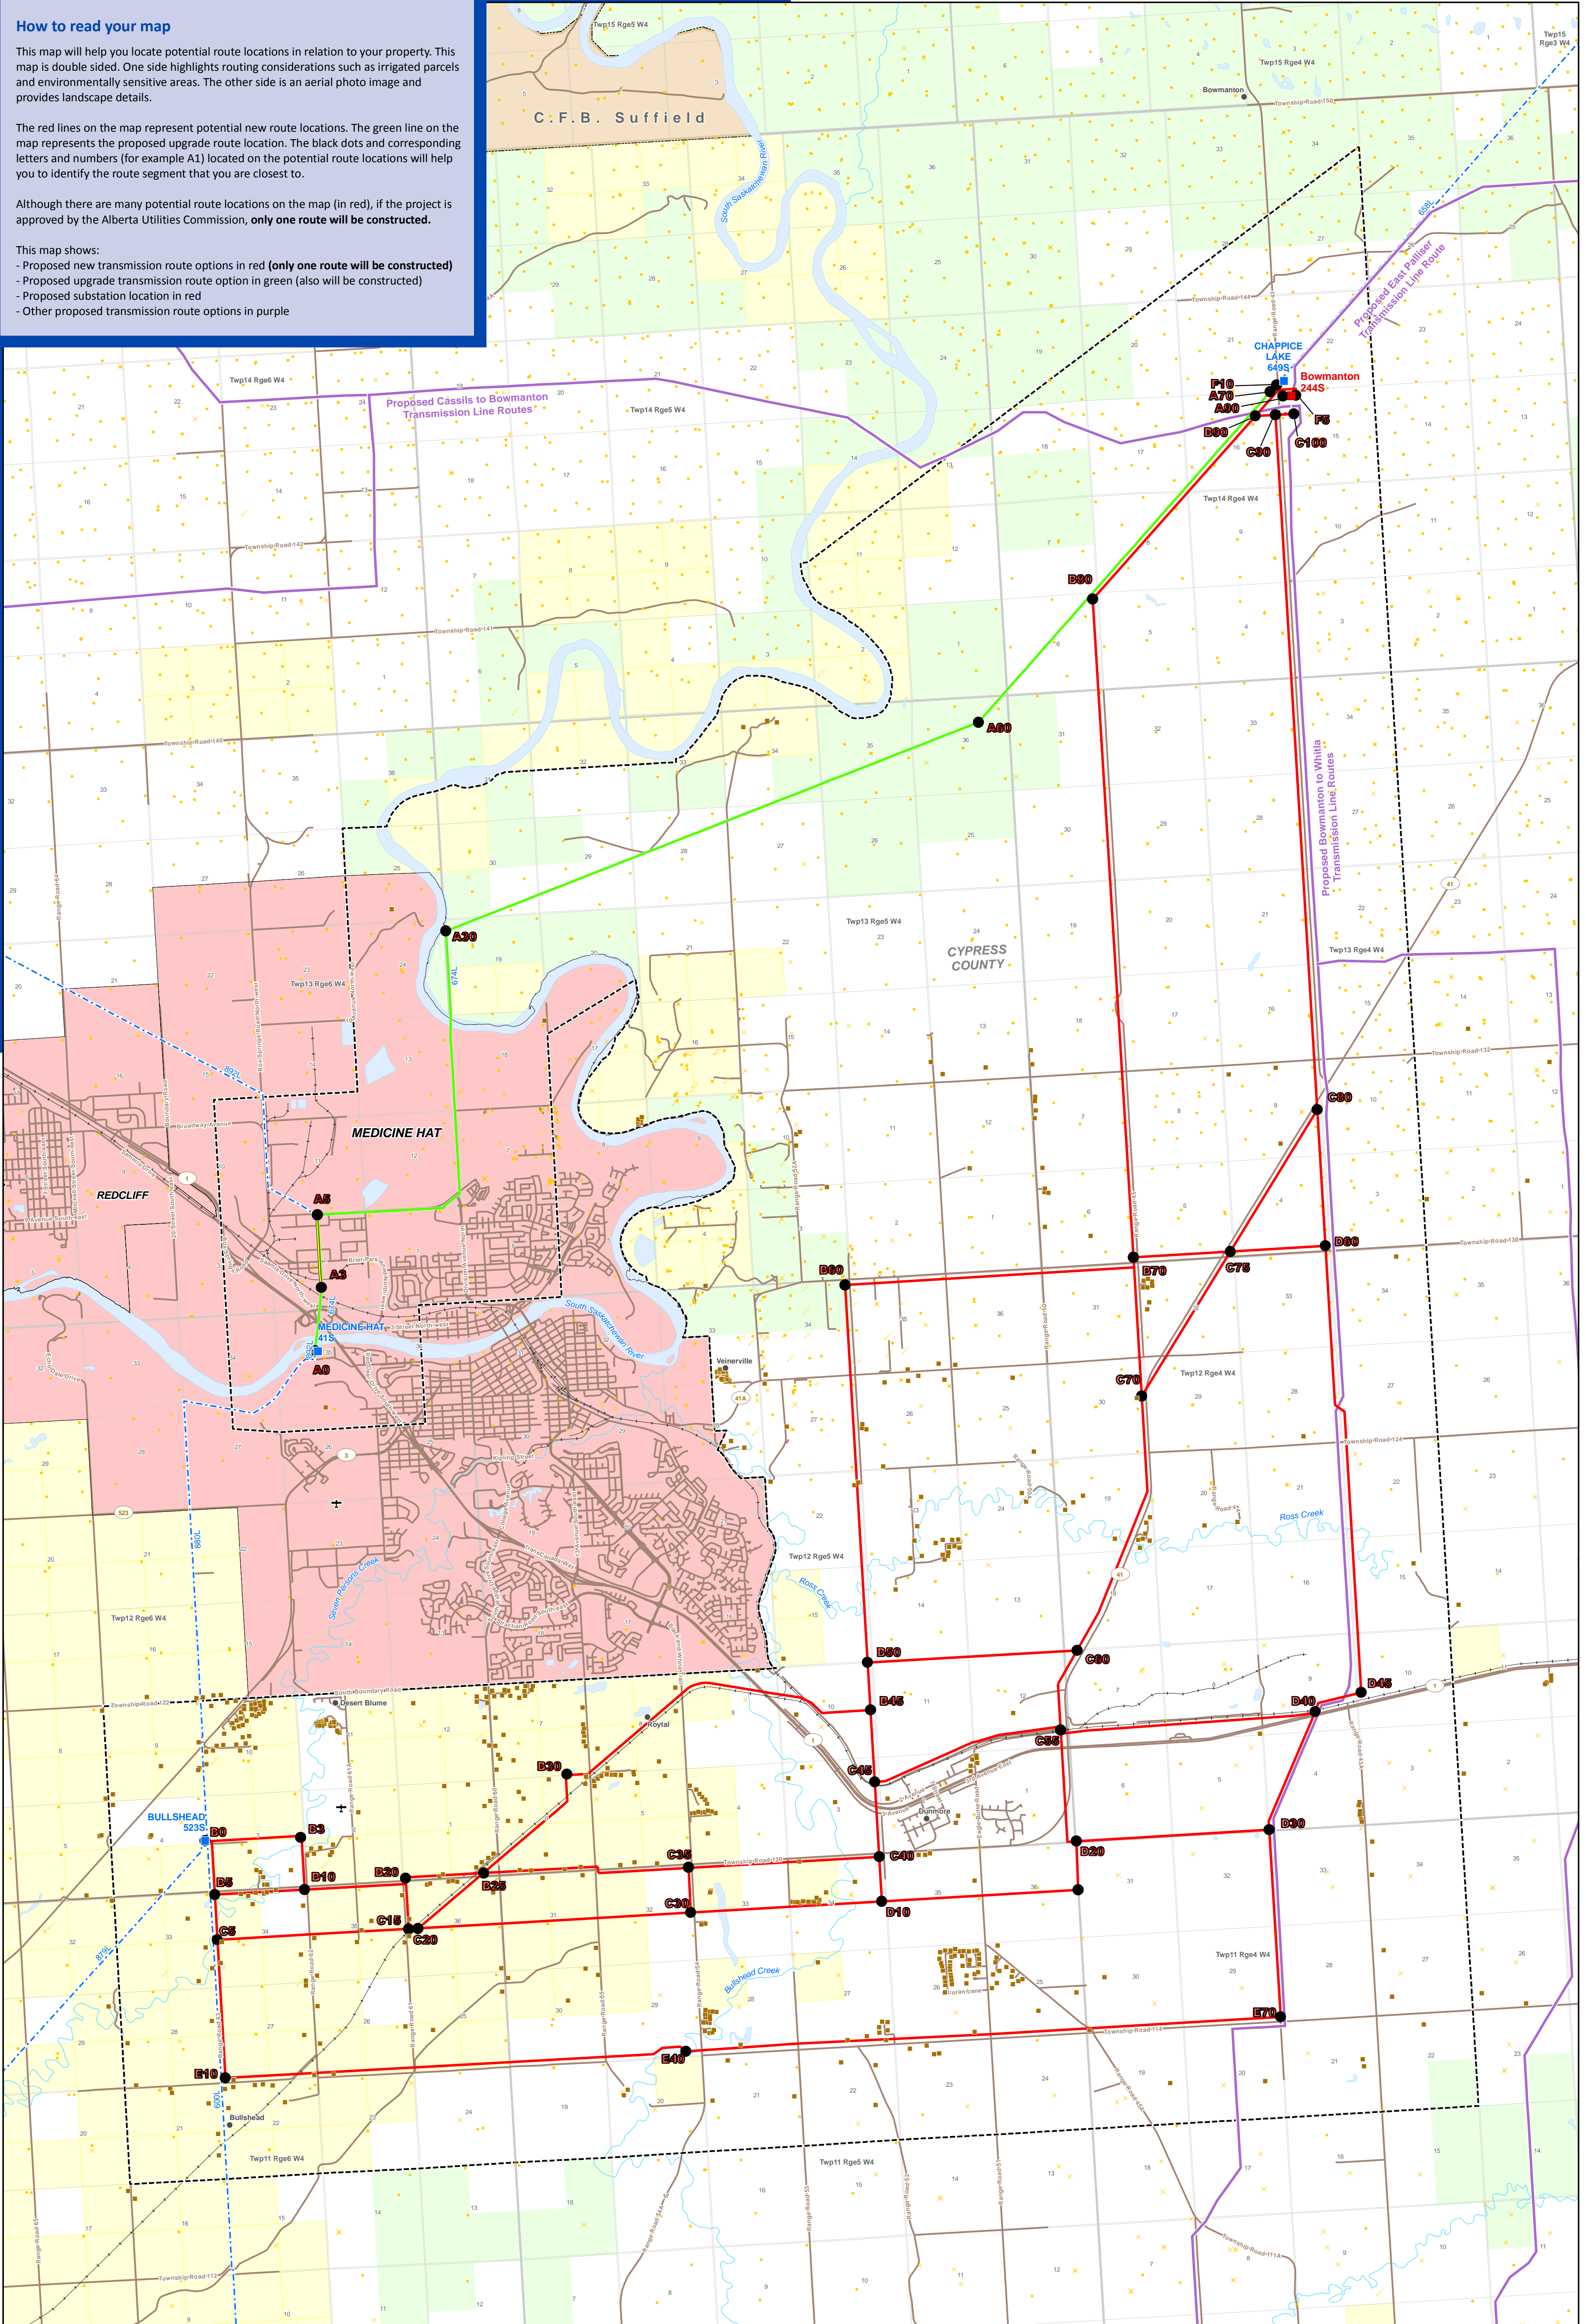

This map will help you locate potential route locations in relation to your property. This map is double sided. One side highlights routing considerations such as irrigated parcels and environmentally sensitive areas. The other side is an aerial photo image and provides landscape details.

The red lines on the map represent potential new route locations. The green line on the map represents the proposed upgrade route location. The black dots and corresponding letters and numbers (for example A1) located on the potential route locations will help you to identify the route segment that you are closest to.

Although there are many potential route locations on the map (in red), if the project is approved by the Alberta Utilities Commission, **only one route will be constructed.**

This map shows:

- Proposed new transmission route options in red (**only one route will be constructed**)
- Proposed upgrade transmission route option in green (also will be constructed)
- Proposed substation location in red
- Other proposed transmission route options in purple

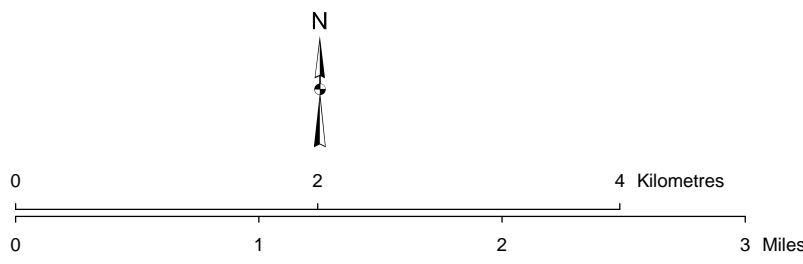

LEGEND

- Point Designation
- Proposed Substation
- Existing Substation
- Proposed Upgrade to Existing Transmission Line
- Proposed Transmission Line - Other
- Salvaged Transmission Line
- Existing Transmission Line
- Study Area
- Hamlet or Locality
- Residence
