

How to read your map

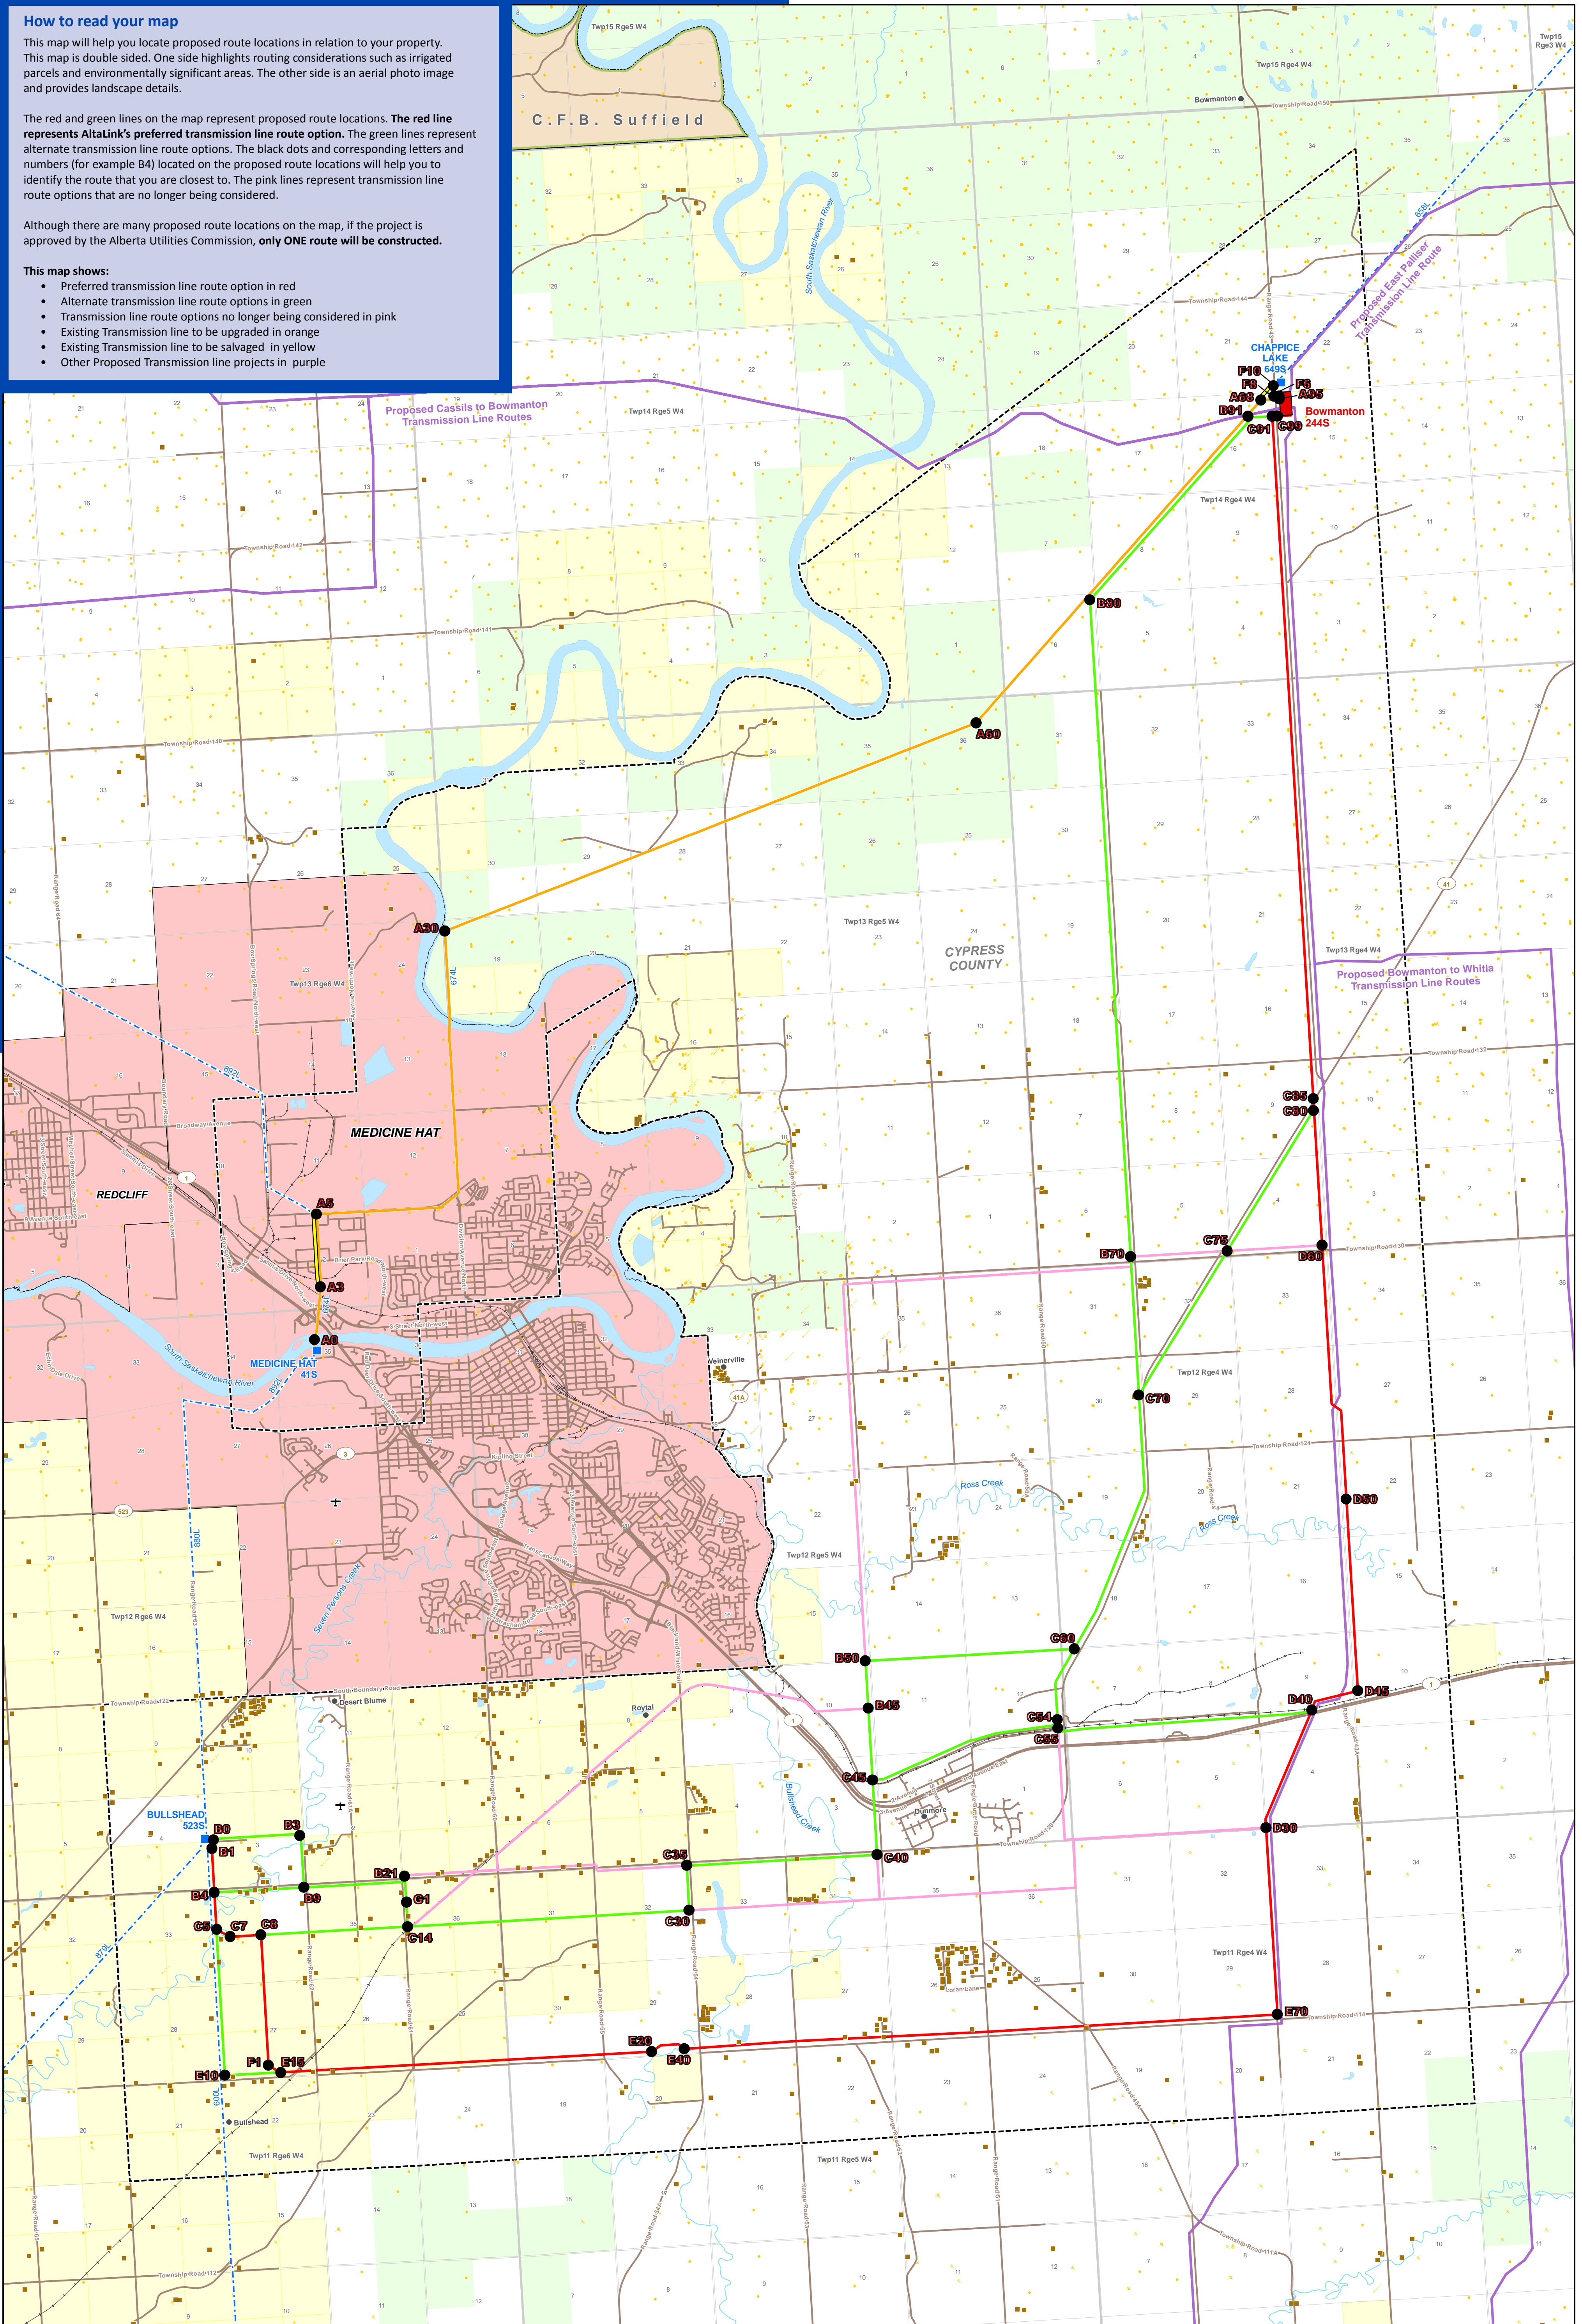

This map will help you locate proposed route locations in relation to your property. This map is double sided. One side highlights routing considerations such as irrigated parcels and environmentally significant areas. The other side is an aerial photo image and provides landscape details.

The red and green lines on the map represent proposed route locations. The red line represents AltaLink's preferred transmission line route option. The green lines represent alternate transmission line route options. The black dots and corresponding letters and numbers (for example B4) located on the proposed route locations will help you to identify the route that you are closest to. The pink lines represent transmission line route options that are no longer being considered.

Although there are many proposed route locations on the map, if the project is approved by the Alberta Utilities Commission, **only ONE route will be constructed.**

This map shows:

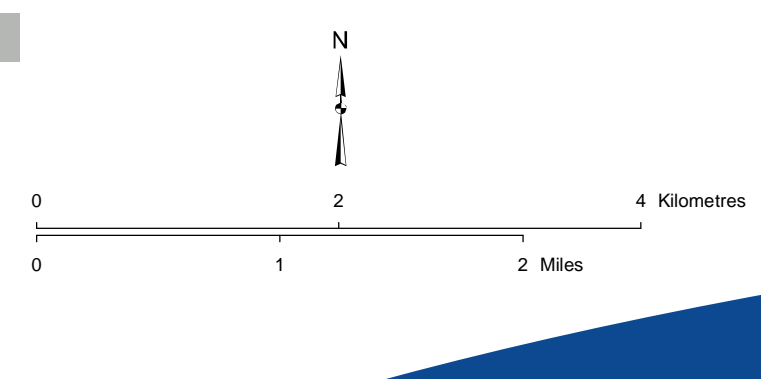

- Preferred transmission line route option in red
- Alternate transmission line route options in green
- Transmission line route options no longer being considered in pink
- Existing Transmission line to be upgraded in orange
- Existing Transmission line to be salvaged in yellow
- Other Proposed Transmission line projects in purple

LEGEND

● Point Designation	Existing Transmission Line to be Salvaged	Highway or Road
■ Existing Substation	Existing Transmission Line	Railway
— Preferred Transmission Line Route Option	Study Area	River or Stream
— Alternate Transmission Line Route Options	Hamlet or Locality	Environmentally Significant Area
— Transmission Line Route Options	Residence	Irrigated Parcel*
— No Longer Being Considered	Gas or Oil Well	Military Base
— Other Proposed Transmission Line Projects	Abandoned or Dry Well	Other Protected Area
	Injection or Service Well	Urban Area
	Drilling Well	Water Body
