**Harry Smith 367S Substation and Transmission Lines
South and West of Edmonton Area Transmission Development
Telecommunications Work on Transmission Line 739L**

You are receiving this information package because you reside or own lands near AltaLink's existing 739L transmission line, located along Highway 628 and Range Rd 275/Boundary Road. You may have received information in September 2015 about transmission line work on the existing 739L transmission line.

As a result of further engineering, AltaLink has determined that it does not need to install fibre optic cable on the existing 739L transmission line for communication between Stony Plain 434S Substation and the proposed Harry Smith 367S Substation. The telecommunications between these two substations will be accomplished through an upgrade to the radio telecommunications network.

Please note that if you are within the proximity of the portion of the 739L transmission line located outside of the original Harry Smith 367S Substation and Transmission Line Project area, then you will not be receiving updates moving forward. However, if you reside on or own other land located within the original Harry Smith 367S Substation and Transmission Line Project area then you will continue to receive project updates from us.

Contact us

If you wish to follow the progress of the Harry Smith project or if you have questions, please contact us at 1-877-267-1453 (toll-free) or stakeholderrelations@altalink.ca. Further information about the Project is also available at:
