ATCO Power Heartland Generating Station Interconnection Notice of application filing

Thank you for your ongoing participation in the ATCO Power Heartland Generating Station Interconnection. We submitted an application for the project to the Alberta Utilities Commission (AUC) on April 25, 2017.

Next steps

The AUC will review the application and can approve, approve with conditions or deny the project. The AUC may also host a hearing regarding the project. To learn more about the AUC process and how you can become involved please visit www.auc.ab.ca.

We will notify you of the AUC's decision regarding the project. Please note, the project newsletter you may have received in October 2016 stated that construction would start in spring 2019 and take until winter 2019 to complete. After further analysis, construction is planned to begin in November 2018 and will take approximately 12 months to complete if the project is approved.

Where construction activities are required to take place on private property, we will contact you in advance to discuss the specific dates and times we will require access to your property.

The preferred route and route variant is indicated on the included map in red and purple, respectively. Additional maps can be found on AltaLink's website. If the project is approved, you may see or hear the following during the construction:

- noise and construction crews
- work at the existing Josephburg Substation and the proposed Lamont Substation
- transmission structure construction and wire stringing

The application

The application can be viewed on the AUC's website at www.auc.ab.ca. To access the application, click on the 'eFiling System Login' button on the left side of the page and log in to your eFiling account. If you do not have an account, select 'New Account' and follow the steps onscreen. Please note any questions or concerns regarding account creation and management should be directed towards the AUC at info@auc.ab.ca.

Once your account has been created and you have successfully logged in, enter 22602 into the 'Go to...' search bar on the left side of the page to locate the application. Alternatively, you can navigate to 'Find', click 'Proceedings' and enter "ATCO Power Heartland" into the 'Proceedings description' search bar.

If you have any issues accessing the application, please contact us at the details below and we will mail a copy of the application to you.

Structure information update

Please note that the 138 kV structures proposed to be added to the existing 807L line near the Josephburg Substation will look similar to the those pictured below. These structures will be installed on AltaLink property.

Project background

This ATCO Power Heartland Generating Station Interconnection will connect ATCO Power's Heartland Generating Station to the electric system. The project is located approximately two kilometres northeast of the City of Fort Saskatchewan in Strathcona County and involves:

- constructing one single-circuit 240 kV (kilovolt) transmission line (to be named 1181L), approximately 5.5 kilometres long, to connect a planned substation at the ATCO Power Heartland Generating Station (to be named Lamont 400S) to the existing Josephburg Substation
- adding one new 240 kV circuit breaker and associated equipment to the Josephburg Substation
- installation of an overhead fibre optic cable on the transmission structures
- modifying existing transmission lines in the project area to accommodate crossings and connections to the substation

Contact us

Please contact us at stakeholderrelations@altalink.ca or 1-877-267-1453. Further information about this project and maps are available at <http://www.altalink.ca/projects/view/21/atco-power-heartland-generating-station-interconnection>.

Sincerely,

Dave Lee
Manager, Stakeholder Engagement
