

ALTALINK OPEN HOUSE

You're invited

551L Transmission Line Rebuild

AltaLink is proposing to replace the aging structures on the 551L transmission line within Banff National Park. On average, the new structures will be approximately two metres (six feet) taller than the existing structures and will look similar in appearance. Trees along the right-of-way that could potentially fall onto the line will also be removed.

The line was constructed in the early 1960s and needs to be rebuilt to maintain the reliability of the electric system west of the Town of Banff and in the Lake Louise area.

The 551L transmission line is located between the Town of Banff and the Village of Lake Louise, and is approximately 60 kilometres (37 miles) long. The line connects the Lake Louise Substation to the Banff Substation.

Parks Canada is reviewing the Detailed Environmental Impact Analysis (DEIA) submitted by AltaLink for the project and will post the draft publicly for the relevant agencies to comment. Once the DEIA is finalized, Parks Canada will make a decision on the project. AltaLink may also file information with the Alberta Utilities Commission as required.

Please attend our open house. We want to hear your thoughts and concerns to help us understand what is important to you as we move forward with the project.

Date	Location	Address	Time
Thursday, October 22, 2015	The Fenlands Banff Recreation Centre	100 Mt. Norquay Rd Banff, AB	3 p.m. - 6.30 p.m.
