911L Transmission Line Removal Project update

Thank you for your ongoing participation in the 911L Transmission Line Removal project. AltaLink is proposing to remove approximately sixteen kilometres of existing transmission line within the Piikani Reserve, and approximately five kilometres within the Municipal District of Willow Creek. You are receiving this letter because you are near an existing transmission line proposed to be removed.

We plan to begin construction and salvage activities in winter of 2018, and anticipate it will take three months to complete.

Construction activities will include:

- salvaging the remaining 911L transmission line
- salvaging the existing 603AL transmission line
- salvaging the existing 608BL transmission line
- salvaging two 138 kV circuit breakers and associated equipment from the Peigan Substation
- installing a new single-pole wood structure along the existing 603L and 608AL alignments.
The new structure will:
 - have guy wires
 - be located within road allowance
 - be 20 to 24 metres tall
 - look similar to the existing structures
 - result in the removal or addition of guy wires on neighbouring structures

AltaLink proposes to utilize existing access trails, transmission line right-of-way and road allowance to facilitate the removal of the transmission lines. AltaLink will consult with landowners on an individual basis if they are affected by these changes, or if additional off-right-of-way access, temporary workspace or storage areas are required.

Certain portions of the substation equipment and transmission lines to be removed are owned by TransAlta. AltaLink and TransAlta will be collaborating to inform stakeholders of the project specific details in these locations.

Project background

The 911L transmission line is no longer required due to the construction and energization of the 1037L/1038L transmission lines, which were part of the South Foothills Transmission Project (SFTP).

The 603AL and 608BL transmission lines are no longer required due to the construction and energization of the Windy Flats 138kV Line Re-Configuration Project.

Contact us

AltaLink is available to gather any further input you have or address any questions or concerns. Please contact us at stakeholderrelations@altalink.ca or 1-877-267-1453.
