ATCO Jasper Interconnection Notice of application filing

Thank you for your ongoing participation in the ATCO Jasper Interconnection. We submitted an application for the project to the Alberta Utilities Commission (AUC) on November 30, 2016.

Project update

Please note that AltaLink will require additional temporary workspace for this project. Please see the included map for details. If you have concerns or comments regarding these changes, please contact us using the information provided at the end of this letter.

August 2016 newsletter correction

In the previous project update you may have received in August 2016, the AltaLink newsletter incorrectly identified that the Alberta Electric System Operator (AESO) need overview required two transformers and two circuit breakers additions at each of the Watson Creek and Cold Creek substations. The required transformer and circuit breaker additions are in fact at the Watson Creek and Sheridan substations.

The Sheridan Substation is a new substation that will be constructed by ATCO Electric, approximately eight kilometres north of the town of Jasper. For more information on ATCO Electric's Sheridan Substation, visit www.atcoelectric.com/Projects/ProjectPages/Jasper-Interconnection-Project.

Next steps

The AUC will review the application and can approve, approve with conditions or deny the project. The AUC may also host a hearing regarding the project. To learn more about the AUC process and how you can become involved, please visit www.auc.ab.ca.

We will notify you of the AUC's decision regarding the project. If the project is approved, construction could begin in July 2017 and will take approximately 11 months to complete.

If the project is approved, you may see or hear the following during the construction process:

- noise and construction crews
- vegetation clearing on the right-of way as required
- transmission structure construction
- wire stringing on transmission structures
- construction activities at an existing substation

The application

The application can be viewed on the AUC's website at www.auc.ab.ca. To access the application, click on the 'eFiling System Login' button on the left side of the page and log in to your eFiling account. If you do not have an account, select 'New Account' and follow the steps onscreen. Please note any questions or concerns regarding account creation and management should be directed towards the AUC at info@auc.ab.ca.

Once your account has been created and you have successfully logged in, enter 22125 into the 'Go to...' search bar on the left side of the page to locate the application. Alternatively, you can navigate to 'Find', click 'Proceedings' and enter "ATCO Jasper" into the 'Description' search bar. If you have any issues accessing the application, please contact us at the details below and we will mail a copy of the application to you.

Project background

ATCO Electric and AltaLink are proposing to connect the Jasper National Park area to the electric system. AltaLink's scope in the proposed project includes:

- constructing approximately eight kilometres of new 69 kV transmission line to the boundary of Jasper National Park
- expanding the existing Watson Creek Substation
- adding two transformers and two 138 kV circuit breakers to the Watson Creek Substation
- modifying one existing structure at the Watson Creek Substation
- adding three new structures, one of which will support a line bypass switch, outside of the existing Cold Creek Substation

Completing this project will help ATCO Electric meet the new and existing demand for electricity in the Jasper area.

Contact us

AltaLink is available to gather any further input you have and address any questions or concerns. Please contact us at stakeholderrelations@altalink.ca or 1-877-269-5903. Further information about this project and maps are available at: <http://www.altalink.ca/projects/view/241/atco-jasper-interconnection>

Sincerely,

Dave Lee
Manager, Stakeholder Engagement
