**13L Transmission Line Rebuild
Project update**

You are receiving this letter because there have been changes to the 13L Transmission Line Rebuild project and we'd like to provide you with an update.

At the north end of the existing 13L line, AltaLink is proposing to salvage an additional 1.1 kilometres of transmission line. This salvaged line will be replaced by approximately 1.6 kilometres of new transmission line on a new alignment to accommodate a future subdivision development. AltaLink requires a new 15 metre right-of-way for this new section of transmission line. Please refer to the included map for routing details between point designations A20 and A15.

At the south end of the existing 13L line, AltaLink is proposing to adjust the centreline approximately 10 metres east to accommodate a future road development on 64th Street East. Approximately 680 metres of line will be salvaged and rebuilt at the south end of the line. AltaLink requires a new 10 metre right-of-way for this new section of line. Please refer to the included map for routing details between point designations A0 and A7.

Please note the existing poles on the existing transmission line will be salvaged after the new line is constructed. Please see the update schedule below.

File application with Alberta Utilities Commission (AUC)	August 2017
Start construction if project is approved	February 2018
Construction completed	December 2018

Project background

The 13L Transmission Line Rebuild is located between the towns of Okotoks and High River and involves:

- salvaging 13.6 kilometres of 69 kV transmission line and replacing it with approximately 14 kilometres of new 69 kV transmission line with structures, approximately 10 to 13 metres taller than the existing structures, along existing easements and a portion along new alignment

The 13L transmission line was built in 1929 and has reached the end of its life cycle. Rebuilding this transmission line will ensure that residents in the area continue to have a reliable supply of power.
