EPCOR Riverview Substation Connection Project update

You are receiving this letter because there have been changes to the EPCOR Riverview Substation Connection and we'd like to provide you with an update.

You may have received information from EPCOR regarding their Riverview Substation project that is proposed to be constructed in Edmonton in the Transportation/Utility Corridor near the Anthony Henday Drive and Maskêkosihk Trail (formerly 184th Street). EPCOR is proposing a second substation site option approximately 170 metres west of the originally proposed location. EPCOR will be filing both proposed substation locations with the Alberta Utilities Commission (AUC). If approved, only one substation will be built, but any one of the filed site options could be selected by the AUC.

AltaLink is proposing to install steel monopole structures, approximately 20 to 35 metres tall, on the 1043L line to accommodate the connection of the proposed EPCOR substation to the electric system. The number of monopole structures needed will be determined upon completion of detailed engineering. Originally, AltaLink was proposing to apply for, construct and own the two transmission lines connecting the proposed EPCOR Riverview Substation and AltaLink's 1043L existing line (to be renamed 1139L and 1164L). However, EPCOR will now be applying for, constructing, and taking ownership of the approximately 70 metres of new transmission line from AltaLink's 1043L existing line to EPCOR's proposed substation. Approximately 60 metres of existing transmission line will be salvaged as part of this project, please see the included map for details.

If EPCOR's newly proposed substation site option is selected and approved by the AUC, the location of these structures will shift approximately 170 metres west from the previous project information letter you may have received from AltaLink. AltaLink's project schedule has been updated.

File application with Alberta Utilities Commission (AUC)	Late 2017/Early 2018
Start construction	August 2019
Complete construction	October 2019

Project background

AltaLink is proposing to connect EPCOR's Riverview Substation to the transmission system by installing steel monopole structures on an existing transmission line. EPCOR will build and own two short transmission lines (approximately 70 metres long) between the proposed substation and AltaLink's proposed new structures.

Please see the attached AESO Need Overview Update for more information on the need for the project.

The AESO is an independent, not-for-profit organization responsible for the safe, reliable and economic planning and operation of the provincial transmission grid. For more information about why this project is needed, please refer to the AESO's Need Overview Update included with this package, or visit www.aeso.ca. If you have any questions or concerns about the need for this project you may contact the AESO directly. You can make your

questions or concerns known to an AltaLink representative who will collect your personal information for the purpose of addressing your questions and/or concerns to the AESO. This process may include disclosure of your personal information to the AESO.

Contact us

We are available to gather any further input you have or address any questions or concerns. Please contact us at stakeholderrelations@altalink.ca or 1-877-269-5903. Further information about this project is available at: www.altalink.ca/projects/view/254/epcor-riverview-substation-connection

To learn more about the EPCOR's proposed project, please contact EPCOR at 1-780-412-4040 or consultation@epcor.com.

To learn more about Alberta's electric system and the need for the project, please contact the AESO at 1-888-866-2959 or stakeholder.relations@aeso.ca

Sincerely,

Dave Lee
Manager, Stakeholder Engagement
