

ALTALINK OPEN HOUSE

You're invited

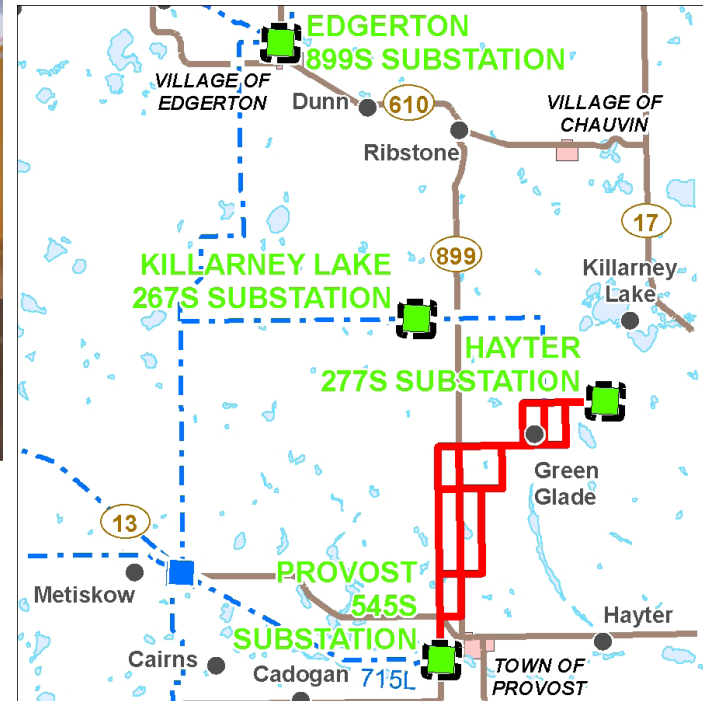

Fortis Provost Reliability Upgrade

At the request of FortisAlberta, AltaLink is proposing to construct a transmission line in your area to improve the reliability of electricity services in the municipal districts of Provost and Wainwright. If approved, the Fortis Provost Reliability Upgrade project involves:

- building a new 138 kV (kilovolt) transmission line, approximately 33 kilometres long between the Hayter and Provost substations
- adding new equipment and expanding the fenceline at the Provost Substation
- adding new equipment and replacing the wood pole telecommunications structure with a new 20 - 30 metre tall steel lattice telecommunications tower at the Hayter Substation
- replacing the wood pole telecommunications structure with a new 30 - 35 metre tall steel lattice telecommunications tower at the Edgerton Substation
- adding new equipment and replacing the wood pole telecommunications structure with a new 25 - 35 metre steel lattice telecommunications tower at the Killarney Lake Substation

Please join us at our open house. We will be available to share information, gather your input and address any questions or concerns you might have.
