Suncor Forty Mile Wind Power Project Connection Notice of Project Approval

Thank you for your ongoing participation in the Suncor Forty Mile Wind Power Project Connection. The Alberta Utilities Commission (AUC) approved the project for construction on October 31, 2019.

Next steps

We plan to begin construction in December 2021 and expect it to take approximately 4-6 months to complete. Where construction activities are required to take place on private property, we will contact you in advance to discuss the specific dates and times we will require access to your property.

Depending on where you are in relation to the project, you may see or hear:

- noise and construction crews
- transmission structure construction
- wire stringing on the transmission structures
- work at the Whitla 251S Substation

AUC approval

When the AUC approves a transmission project, it grants AltaLink permits and licences. The permits and licences for this project can be viewed on the AUC website at:

<https://www2.auc.ab.ca/Proceeding24123/SitePages/Home.aspx>

To view the above link, you will need to log in to your eFiling account. If you do not have an account, select 'New Account' in the Login box and follow the steps onscreen. Please note any questions or concerns regarding account creation and management should be directed towards the AUC at info@auc.ab.ca.

If you have any issues accessing these Permits and Licences, please contact us at the details below and we will mail copies of the documents to you.

Project background

The Project consists of constructing approximately 2.5 kilometres of new 240 kilovolt (kV) transmission line (1129L) from the existing Whitla 251S Substation to Forty Mile Granlea Wind GP Inc.'s Maleb 530S Substation. Optical ground wire (OPGW) will be installed along the new transmission line, and may be installed as part of the overhead shield wire or be buried within the right-of-way. A new 240 kV circuit breaker and other associated equipment will be required at the Whitla 251S Substation, which will not require any modifications to the existing substation layout.

The proposed single circuit 240 kV transmission structures will:

- be steel H-frame (two pole) and three pole structures
- be approximately 17 to 25 metres tall
- have a distance between structures of approximately 160 metres
- have a right-of-way approximately 30 metres wide on private property

Contact us

We are available to address any questions or concerns you may have. Please contact us at stakeholderrelations@altalink.ca or 1-877-267-1453. Further information about this project and maps are available at <http://www.altalink.ca/projects/view/259/suncor-forty-mile-wind-power-project-connection>

Sincerely,

Dave Lee
Manager, Stakeholder Engagement
