Grist Lake Substation and Transmission Line Project Notice of project cancellation

Thank you for your participation in the Grist Lake Substation and Transmission Line Project. You may have previously received information regarding the project.

This letter is to inform you that on November 13, 2019, the Alberta Electric System Operator (AESO) cancelled Fortis Alberta's request for system access service. As a result, AltaLink's Grist Lake Substation and Transmission Line Project is no longer required. AltaLink will be applying to the Alberta Utilities Commission to cancel the facility related approvals. If you have questions about the project cancellation, please contact the AESO at 1-888-866-2959 or at stakeholder.relations@aeso.ca.

Project background

The Grist Lake Substation and Transmission Line Project was intended to connect Devon Canada Corporation's proposed steam assisted gravity drainage facility to Alberta's electric system and was approved by the AUC by Decision 22273-D01-2017 and 22149-D01-2016. The project was located approximately 30 kilometers southeast of Conklin, and substation was located in LSD 10 of Section 26, 74-6-W4. The project included:

- a new substation (called Grist Lake Substation)
- modifications to the existing Pike Substation (the Pike Substation was constructed as part of AltaLink's Christina Lake Area Transmission Development)
- approximately 6.5 kilometres of new 138 kV double circuit transmission line (called 476/477L) to connect the Grist Lake Substation to the Pike Substation

Contact us

We are available to address any questions or concerns you may have. Please contact us at stakeholderrelations@altalink.ca or 1-877-267-1453.
