

Nisku 149S Substation Transformer Replacement

You are receiving this newsletter because you are near the proposed Nisku 149S Substation Transformer Replacement, and we want your input.

AltaLink is proposing to upgrade equipment at its existing Nisku 149S substation located east of the City of Leduc. The upgrade will ensure a reliable supply of electricity is available in the area for years to come.

ANTICIPATED PROJECT SCHEDULE

<p>MARCH 2026 Notify and consult with stakeholders</p>	<p>MARCH 2026 File application with Alberta Utilities Commission (AUC)</p>	<p>APRIL 2026 Start construction if project is approved</p>	<p>DECEMBER 2027 Construction completed</p>
---	---	--	--

Although we attempt to follow the anticipated project schedule it is subject to change. We will continue to provide you with updated schedule information if required as the project progresses.

Project details

The proposed project will include replacing two aging **transformers** with two new transformers and associated equipment.

Please refer to the map enclosed in this package for an overview of the proposed project.

Construction workspace

The majority of the work will be completed within the existing substation fenceline; no expansion of the substation fenceline will be required.

AltaLink may require temporary workspace on AltaLink-owned land outside of the substation. Additional workspace requirements will be discussed with affected landowners.

The existing transformers look similar to the picture on the left and will be replaced with new transformers that look similar to the photo on the right.

Providing your input

We will contact landowners, residents, and occupants near the proposed project to gather input and address questions or concerns.

After our consultation and notification process is complete, we will file an application with the Alberta Utilities Commission (AUC).

We will notify stakeholders when we file the application and again once the AUC has reached a decision about the project. To learn more about the AUC process and how you can become involved, please refer to the brochure included in this package titled *Participating in the AUC's independent review process to consider facility applications*.

INCLUDED IN THIS INFORMATION PACKAGE:

- Project map
- AUC brochure: *Participating in the AUC's independent review process to consider facility applications*
- Electric and Magnetic Fields Information

DEFINITIONS:

Substation | Substations are the connection points between power lines of varying voltages and contain equipment that controls and protects the flow of power. Substations include transformers that step down and step up the voltage so power can be transmitted through transmission lines or distributed to your community through distribution lines.

Transformer | Transformers step down the voltage in a substation so power can be distributed safely to your community through distribution lines. Transformers also step up the voltage so power can be transmitted through transmission lines.

Let's talk transmission
