

A photograph showing a landscape at sunset. In the foreground, there are two large, cylindrical grain silos with corrugated metal siding. Behind them, a series of high-voltage electrical transmission towers (pylons) stretch across the horizon, with power lines sagging between them. The sky is a mix of orange, yellow, and blue, indicating the time is either dawn or dusk. The overall scene suggests a rural or agricultural area with infrastructure.

Electric and Magnetic Fields Information

Electric and Magnetic Fields (EMF)

AltaLink recognizes that people have concerns about exposure to Electric and Magnetic Fields (EMF) and we take those concerns very seriously. Everyone in our society is exposed to EMF from many sources, including:

- power lines and other electrical facilities
- electrical appliances in your home
- building wiring

National and international organizations such as Health Canada and the World Health Organization have been conducting and reviewing research about EMF for more than 40 years. Based on this research, these organizations have not recommended the general public take steps to limit their everyday exposure to EMF from high voltage transmission lines.

If you have any questions about EMF please contact us.
