757L Transmission Line Relocation - Project cancellation notification

Thank you for your participation in the 757L Transmission Line Relocation project. In May 2021, we began consulting with stakeholders on the proposed project.

In March 2022, we provided an update that we had engaged the Alberta Electric System Operator (AESO) to find the best possible options to rebuild this transmission line. Considering the feedback received from stakeholders and subsequent discussions with the AESO, Altalink has made the decision to not proceed with this project at this time. We will continue to work with the AESO to review the current electricity infrastructure in the Eckville and Rimbey area to ensure public safety and maintain reliability.

Project background

Our initial proposal included relocating approximately 10 kilometres of the existing 757L transmission line, currently located on the eastern side of Range Road 30 between the Benalto Substation (in NE-12-38-3-W5) and Township Road 392 (approximately 3.5 kilometres north of the Hamlet of Benalto).

Next steps

We will complete maintenance on the 757L transmission line as required, including replacing some existing transmission structures or associated hardware.

We will contact affected stakeholders before any planned work on the 757L transmission line takes place.

If it is determined that a rebuild is required on the 757L transmission line in the future, this will be a separate project and we will notify and consult with impacted stakeholders at that time.

Contact us

We are available to address any questions or concerns you may have. Please contact us at stakeholderrelations@altalink.ca or 1-877-267-1453. You can also view more information about the project at <http://www.altalink.ca/projects>.

Sincerely,

Kris Gladue

Manager, Stakeholder Engagement
