

Electric system improvements near you

922L/926L Transmission Line Relocation

You are receiving this newsletter because AltaLink is proposing to relocate a transmission line near you.

AltaLink is proposing to relocate a portion of the existing 240 kilovolt (kV) **transmission** line (called 922L/926L) that is located in Parkland County in SW-17-52-4-W5. This portion of line is being affected by water and ice in the winter. There is currently no risk to public safety and electricity service, but relocating this portion will allow us to maintain the safety and reliability of the transmission line in the future.

The proposed project includes:

- relocating a portion of the existing 922L/926L transmission line along a new alignment
- constructing four new structures and modifying two existing structures along the new alignment
- salvaging the replaced transmission line and structures

The **right-of-way** for the existing portion of line is 30 metres (m) and the right-of-way for the relocated portion will be 32 m. All work related to this relocation and salvage, including the potential use of cranes, will occur on land owned by TransAlta.

AltaLink's transmission system efficiently delivers electricity to 85 per cent of Albertans. Dedicated to meeting the growing need for electricity, AltaLink connects Albertans to renewable, reliable and low-cost power. With a commitment to community and environment, AltaLink is ensuring the transmission system will support Albertans' quality of life for years to come. Learn more at www.altalink.ca.

DEFINITIONS:**Transmission**

Transmission lines make up Alberta's electric highway, linking the places where power is generated to where power is used. Transmission lines transport large amounts of power over long distances across the province. The transmission system connects diverse sources of power generation including wind, high-efficiency coal, natural gas and more.

Right-of-way

A right-of-way (ROW) is a strip of land required for the construction, maintenance and safe operation of a transmission line. A ROW refers to the physical space in which a transmission line is located and includes areas on either side of the transmission line structures and the conductors, which are the wires that carry the electricity.

Next steps

After our consultation process is complete, we will file our application with the AUC. The AUC ensures the fair and responsible delivery of Alberta's utility services. To learn more about the AUC process and how you can become involved, please refer to the brochure included in this package titled *Participating in the AUC's independent review process*.

Anticipated project schedule

Notify stakeholders	August 2022
File application with Alberta Utilities Commission (AUC)	September 2022
Construction start date	October 2022
Construction end date	January 2024

Although we attempt to follow the anticipated project schedule it is subject to change. We will continue to provide you with updated schedule information if required as the project progresses.
