937L Transmission Line Urgent Repair

You are receiving this newsletter because you are near the 937L Transmission Line Urgent Repair project, and we want your input.

AltaLink needs to complete urgent repair work to replace the underground portion of its 937L Transmission Line. The line is located within Rocky View County, east of Calgary, adjacent to AltaLink’s Janet 74S Substation.

To maintain a safe and reliable supply of power, AltaLink installed temporary overhead bypass lines that will remain until the underground portion of 937L can be replaced. Approximately 130 metres of underground cables will be excavated, replaced and reburied as part of this project.

All work will take place on AltaLink owned land. More information and an overview of the project area can be found on the map included in this package.

Other projects in the area

You may have received information about another project in the area called the 691L Transmission Line Structure Relocations. For more information about that project, please visit altalink.ca/projects or contact AltaLink using the information provided in this newsletter.

ANTICIPATED PROJECT SCHEDULE

<p>APRIL 2026 Construction started</p>	<p>→</p>	<p>MAY 2026 Notify and consult with stakeholders</p>	<p>→</p>	<p>MAY 2026 File application with Alberta Utilities Commission (AUC)</p>	<p>→</p>	<p>SPRING 2027 Construction completed</p>
---	----------	---	----------	---	----------	--

Although we attempt to follow the anticipated project schedule, it is subject to change. We will continue to provide you with updated schedule information if required as the project progresses.

Temporary bypass lines

The temporary bypass lines are approximately 100 metres long and consist of 11 wood monopole structures. The structures are between 13 to 20 metres tall. Once the repairs are complete, the temporary bypass lines will be removed.

Providing your input

We will contact landowners, residents and occupants near the proposed project to gather input and address questions or concerns.

After our consultation and notification process is complete, we will file an application with the AUC.

We will notify stakeholders when we file the application and again once the AUC has reached a decision about the project. To learn more about the AUC process and how you can become involved, please refer to the brochure included in this package titled *Participating in the AUC's independent review process to consider facility applications*.

Electric and magnetic fields (EMF)

We understand that you may have concerns about exposure to EMF and we take those concerns seriously. Everyone is exposed to power frequency EMF from many sources, including power lines, building wiring, or appliances in your home.

Health Canada, the World Health Organization, and other agencies have not recommended that the public needs to take steps to limit their everyday exposure to EMF from high voltage transmission lines. This includes people that live near the edge of a transmission line right-of-way.

If you have any questions about EMF, please contact us:

Website: www.altalink.ca/emf

Email: emfdialogue@altalink.ca

Phone: 1-877-267-1453

DEFINITIONS:

Transmission | Transmission lines are Alberta's electric highway, linking the places where power is generated to where power is used. Transmission lines transport large amounts of power over long distances across the province. The transmission system connects diverse sources of generation.

Substation | Substations are the connection points between power lines of varying voltages and contain equipment that control and protect the flow of power. Substations include transformers that step down and step up the voltage so power can be transmitted through transmission lines or distributed to your community through distribution lines.

INCLUDED IN THIS INFORMATION PACKAGE:

- Project map
- AUC brochure: *Participating in the AUC's independent review process to consider facility applications*
