

How to read your map

This map will help you locate the transmission line options being proposed in relation to your property. The black dots called designation points (for example A0) will identify different route segments and features along the route. Features may be a change in the right-of-way size, different structure types, or a route deflection which will be noted on the strip map for that area.

- Preferred Transmission Line Route
- Alternate Transmission Line Route
- Substation Transmission Line Connection

For additional details, please refer to the strip maps (SM) included in your package. Although there are two proposed routes, if the project is approved by the Alberta Utilities Commission, only one route will be constructed.

LEGEND

- Point Designation
- Proposed Structure
- Existing Structure Modification
- Existing Transmission Tower
- ✕ Proposed Wind Turbine
- ✕ Approved Wind Turbine
- Preferred Transmission Line Route
- Alternate Transmission Line Route
- Substation Transmission Line Connection
