

**How to read your map**  
 This map will help you locate proposed routes in relation to your property. The side titled Detail Base highlights routing criteria such as residences and environmental considerations. The side titled Detail Photo is an aerial image and provides landscape details. The black dots and corresponding letters and numbers (for example A5) will help you identify the route you are closest to.

- Potential 240 kV transmission line alignment on property.
- Potential 240 kV transmission line alignment in road allowance. The alignment could be in or straddling the road allowance boundary.

Central East Transfer-Out project requires either one or two circuits. AltaLink is planning to use monopole structures for its transmission line (see below). The structure type built will depend on how many circuits are approved. Either structure type could be used on any of the alignments. Please see the newsletter for more details.

Single Circuit Monopole

Double Circuit Monopole

Please note that these structure photos are not to scale. For information on structure dimensions (height, right-of-way widths, etc), please refer to the January 2019 Central East Transfer-Out Transmission Development newsletter.

**LEGEND**

● Point Designation	Substation Upgrade	Municipal or County Boundary	Environmentally Significant Area
Existing Substation	Air Strip	Pipeline	Other Protected Area
Potential 240 kV Transmission Line Alignment on Property	Community Centre	Railway	Urban Area
Potential 240 kV Transmission Line Alignment along Road Allowance	Church	River or Stream	Water Body
Previously Considered Route	Day Care	Road	
Potential ATCO Transmission Line Alignment	Hamlet or Locality	Gravel Pit	
Existing Transmission Line	Hospital	Oil and Gas Plant	
Existing ATCO Transmission Line	Residence	Power Generation Station	
Service Area Boundary	School	Tailing Pile
