

Electric system improvements near you

St. Albert Substation Telecommunications Pole Replacement

You are receiving this newsletter because you are near the St. Albert Substation Telecommunications Pole Replacement project and we want your input.

AltaLink has determined that the existing **telecommunications pole** at the St. Albert **Substation** requires an upgrade. AltaLink is proposing to replace the telecommunications pole as part of our ongoing equipment life-cycle maintenance program. The proposed telecommunications upgrade will allow us to maintain the safety and reliability of the electric system in the area.

We are providing you with:

- project details
- a map of the proposed project
- information about how you can provide your input
- the project schedule

AltaLink's transmission system efficiently delivers electricity to 85 per cent of Albertans. Dedicated to meeting the growing need for electricity, AltaLink connects Albertans to renewable, reliable and low-cost power. With a commitment to community and environment, AltaLink is ensuring the transmission system will support Albertans' quality of life for years to come. Learn more at www.altalink.ca.

DEFINITIONS:

Telecommunications pole

Telecommunications poles and associated equipment transmit data to our system and control centre allowing us to monitor the operation of the electric system and ensure the safety and reliability of the system for our customers.

Substation

Substations are the connection points between power lines of varying voltages and contain equipment that controls and protects the flow of power. Substations include transformers that step down and step up the voltage so power can be transmitted through transmission lines or distributed to your community through distribution lines.

Project details

AltaLink's St. Albert Substation is located in SE-18-54-25-W4, on Villeneuve Road, in the City of St. Albert.

This proposed project includes replacing the existing telecommunications pole inside the substation with a new, taller pole.

The existing pole is 15 metres tall and made of steel. The new pole will:

- be a self-supported steel pole
- be approximately 21 metres tall with the antenna and lightning rod
- comply with Transport Canada's requirements regarding painting and lighting
- be located three metres north of the control building within the existing substation fenceline; no fenceline expansion is required

The proposed telecommunications pole site will not be accessible to the public and the structure will only support AltaLink equipment at this time. Please see the attached Detail Photo Map (DP1) for an overview of the proposed project location.

We will file an application with the Alberta Utilities Commission (AUC) to perform this work. If this project is approved, you may see or hear construction crews in the area. We have set strict standards by which we operate, including restricting work hours to between 7 a.m. and 7 p.m. This reduces the impacts on local residents and businesses, ensuring safe construction practices and follows environmental protection measures.

All work related to this project, including the potential use of cranes, will occur on land owned by AltaLink. Access to private property is not required.

The new telecommunications tower will look similar to the photo above.

The St. Albert Substation

Radio Frequency (RF)

Telecommunication towers use Radio Frequency (RF) signals to transmit and receive information. The point-to-point signals travel along a focused path at low power levels and are well below recommended safety limits. Licensed radio links on a telecommunications tower will not impact any other licensed telecommunication frequencies used by cellular phones, over-the-air television, satellite, radio, or GPS.

The telecommunication tower described in this notification will be installed and operated on an ongoing basis to be in compliance with Health Canada's Safety Code 6, which defines safe levels of RF exposure. To ensure the structural adequacy of the tower, the design and installation will follow industry standards and sound engineering practices.

Providing your input

We will contact landowners, residents and occupants near the proposed project to gather input and address questions or concerns. Our priority is maintaining the health and safety of our employees, contractors, and the general public, while ensuring that we are able to continue to operate our system and keep the lights on for Albertans. We will follow any requested COVID-19 safety protocols for in-person meetings and accommodate your preferred meeting options, including over the phone, virtual or in-person. You can also provide input through our online feedback portal, found here: www.altalink.ca/projectfeedback. If you have any questions or concerns about the pole, contact AltaLink within 30 days of this notice.

After our consultation and notification process is complete, we will file an application with the Alberta Utilities Commission (AUC). The AUC ensures the fair and responsible delivery of Alberta's utility services and will review the application through a process in which stakeholders can participate. We will notify stakeholders when we file the application and again once the AUC has reached a decision about the project. To learn more about the AUC process and how you can become involved, please refer to the brochure included in this package titled *Participating in the AUC's independent review process to consider facility applications*.

Information session

If you are interested in learning more about the project or have any questions, we will be hosting a virtual information session on March 29 at 6 p.m. To register for this session, please email stakeholderrelations@altalink.ca and we will send you more details.

Anticipated project schedule

Notify and consult with stakeholders	March to April 2023
File application with Alberta Utilities Commission (AUC)	May 2023
Start construction if project is approved	June 2023
Complete construction	July 2023

Although we attempt to follow the anticipated project schedule it is subject to change. We will continue to provide you with updated schedule information, if required, as the project progresses.

INCLUDED IN THIS INFORMATION PACKAGE:

- Project map
- AUC brochure: *Participating in the AUC's independent review process to consider facility applications*

OUR COMMITMENT TO SUSTAINABILITY

If the Alberta Utilities Commission (AUC) approves this project, you may see or hear construction crews in the area. We have set strict standards by which we operate, including restricting work hours to reduce the impacts to local residents and businesses, ensuring safe construction practices and following environmental protection measures and appropriate environmental legislation. AltaLink believes that the environmental effects of this project will be negligible. This project is not located on federal lands, therefore Canadian Environmental Assessment Act, 2012 does not apply. AltaLink's safety standards and practices are developed to meet or exceed government guidelines and codes to ensure that our facilities meet the requirements for public, employee and neighbouring facility safety.

PRIVACY COMMITMENT

AltaLink is committed to protecting your privacy. AltaLink will collect, use, and disclose personal information in accordance with AltaLink's Privacy Policy and the *Personal Information Protection Act* (Alberta). As part of the regulatory process for new transmission projects, AltaLink may provide your personal information to Alberta Utilities Commission (AUC). For more information about how AltaLink protects your personal information, visit our website at www.altalink.ca/privacy or contact us directly via e-mail privacy@altalink.ca or phone at 1-877-267-6760.
